Introduction

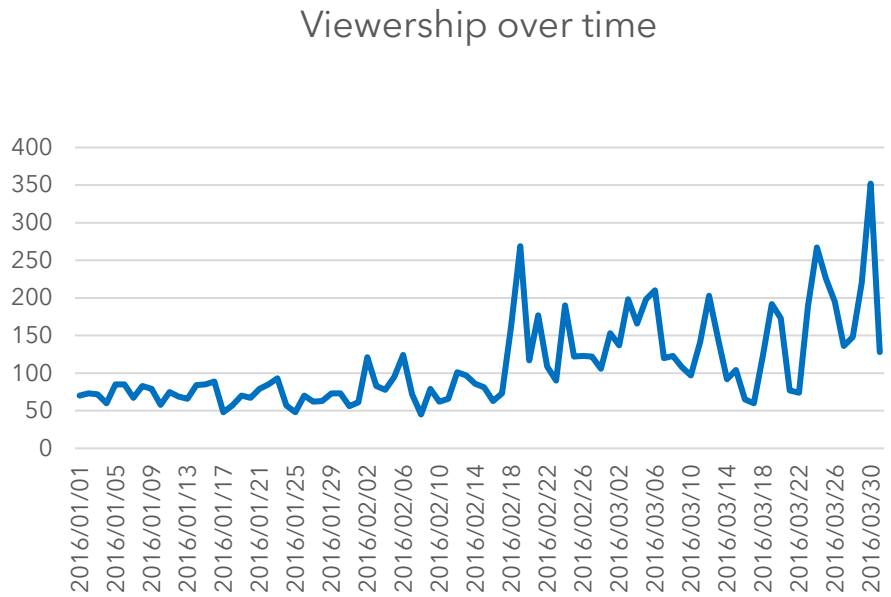
Bright TV is one of the broadcasting satellite services in South Africa. It provides television and streaming services to thousands of subscribers.

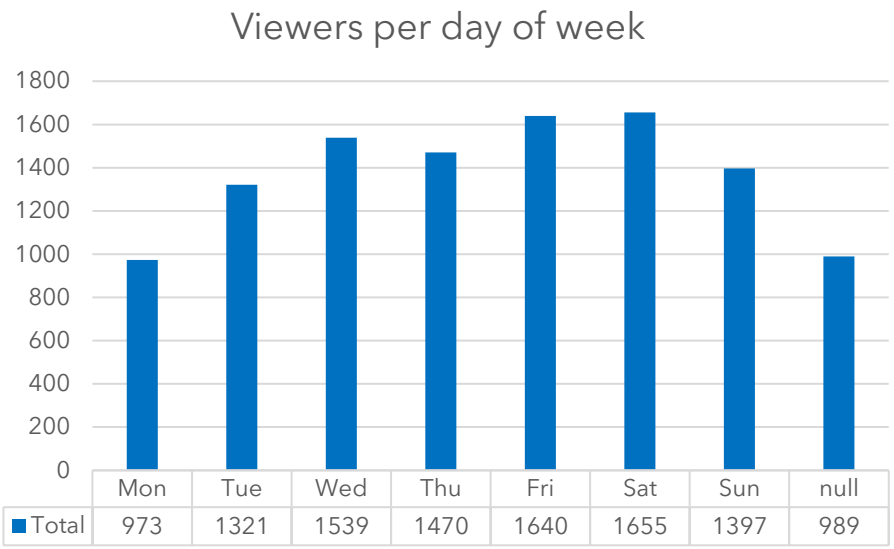
For this finanancial year, the CEO has an objective to grow the subscription base for the company.

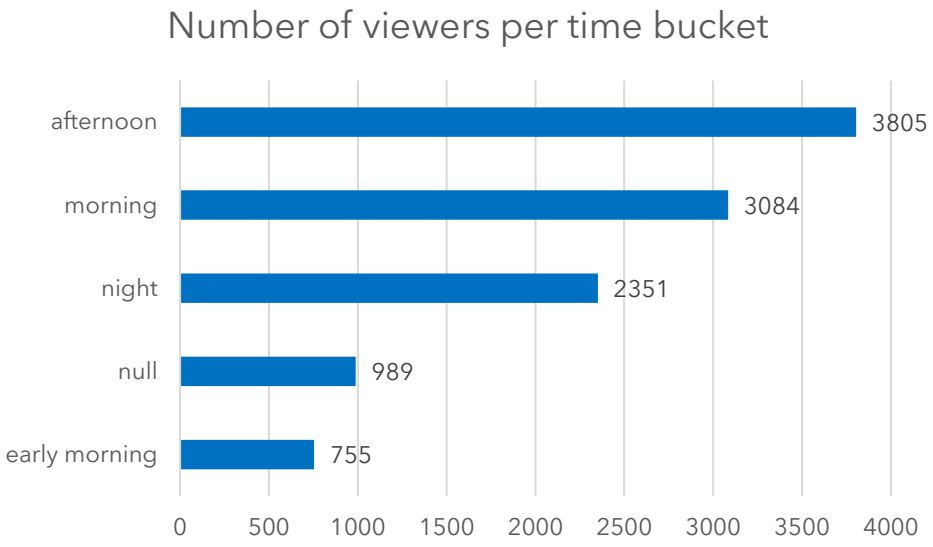
To meet this objective, the CEO needs to understand the customer base that we have, therefore, he has tasked the data analyst of the company with using historical data to better understand customer Behavior. The data analyst has to extract insights to answer the following questions:

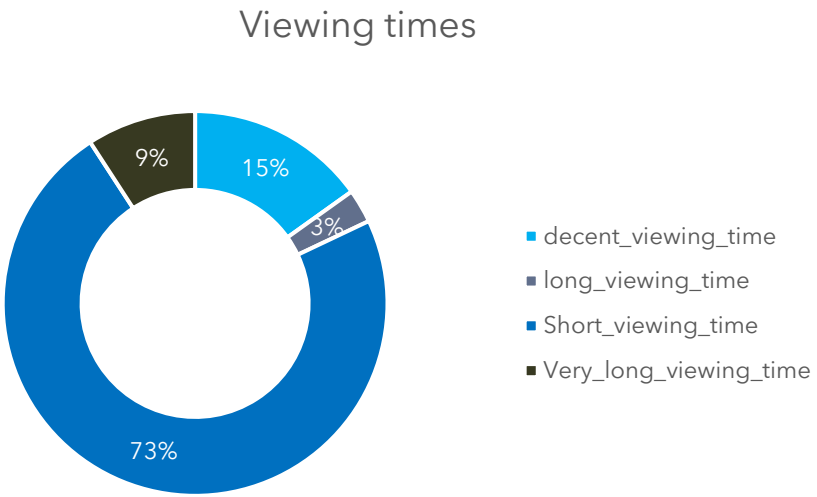
1. What type of factors influence consumption?
2. Content recommendations for low consumption days
3. Initiatives to increase subscription base

Summary-insights on user and usage trends of BrightTV

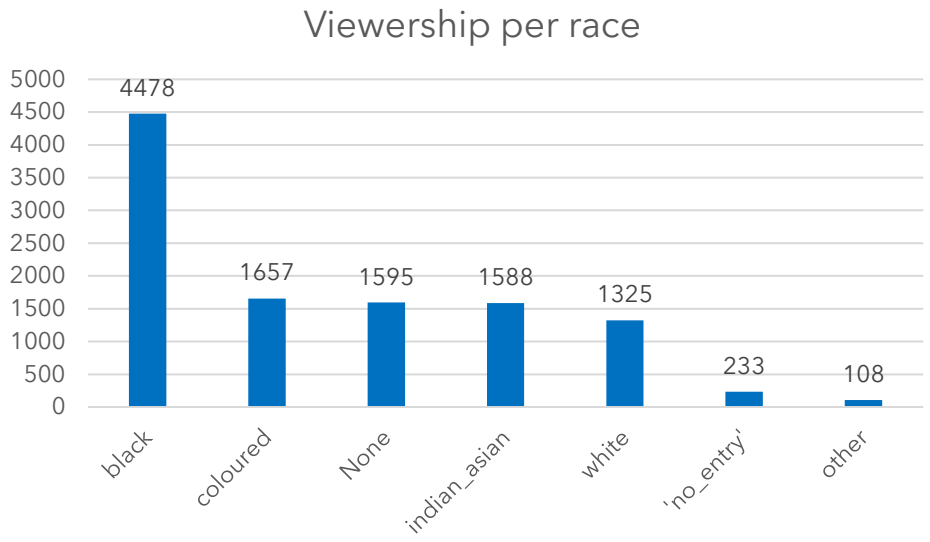


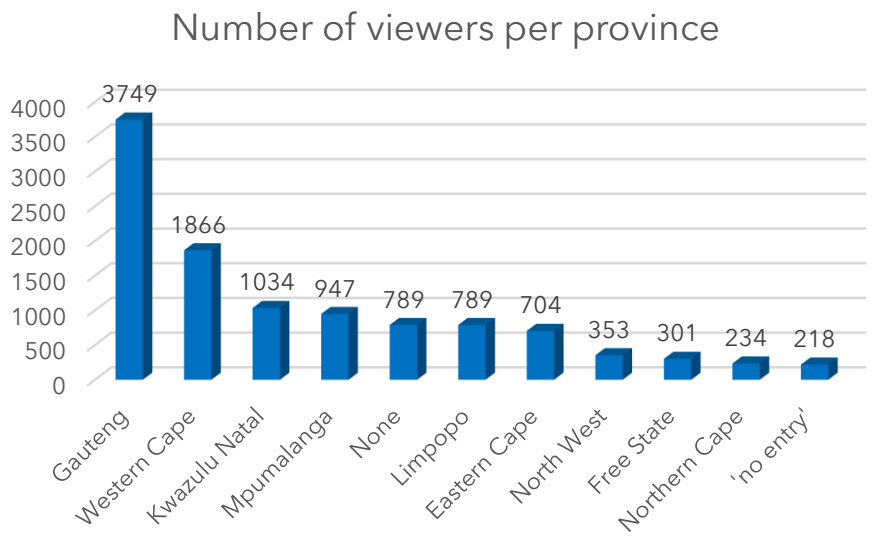


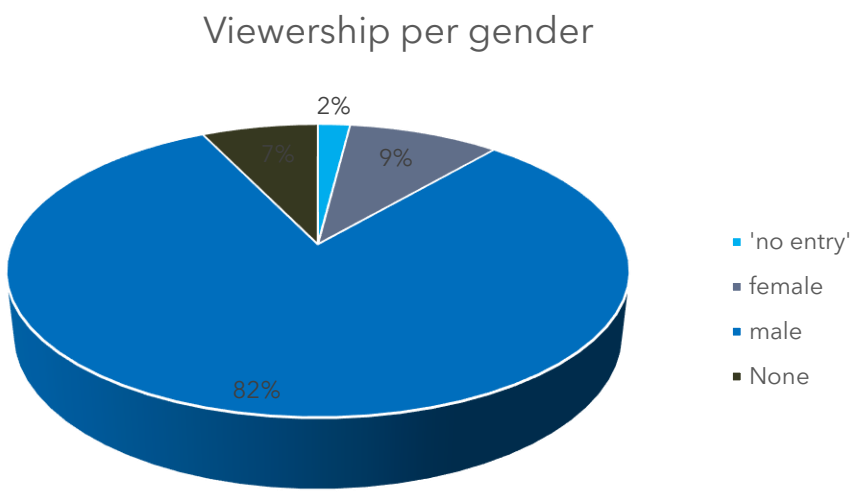


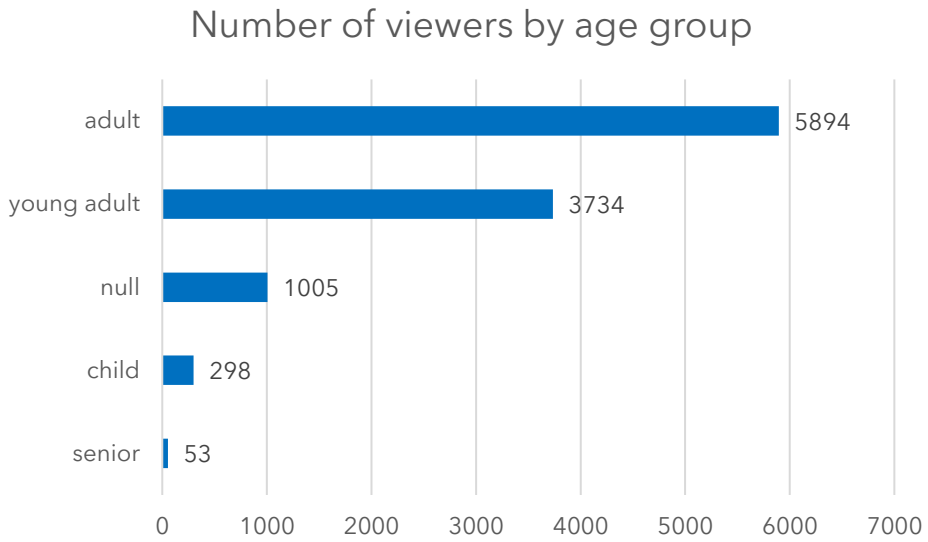


Summary-factors influencing consumption

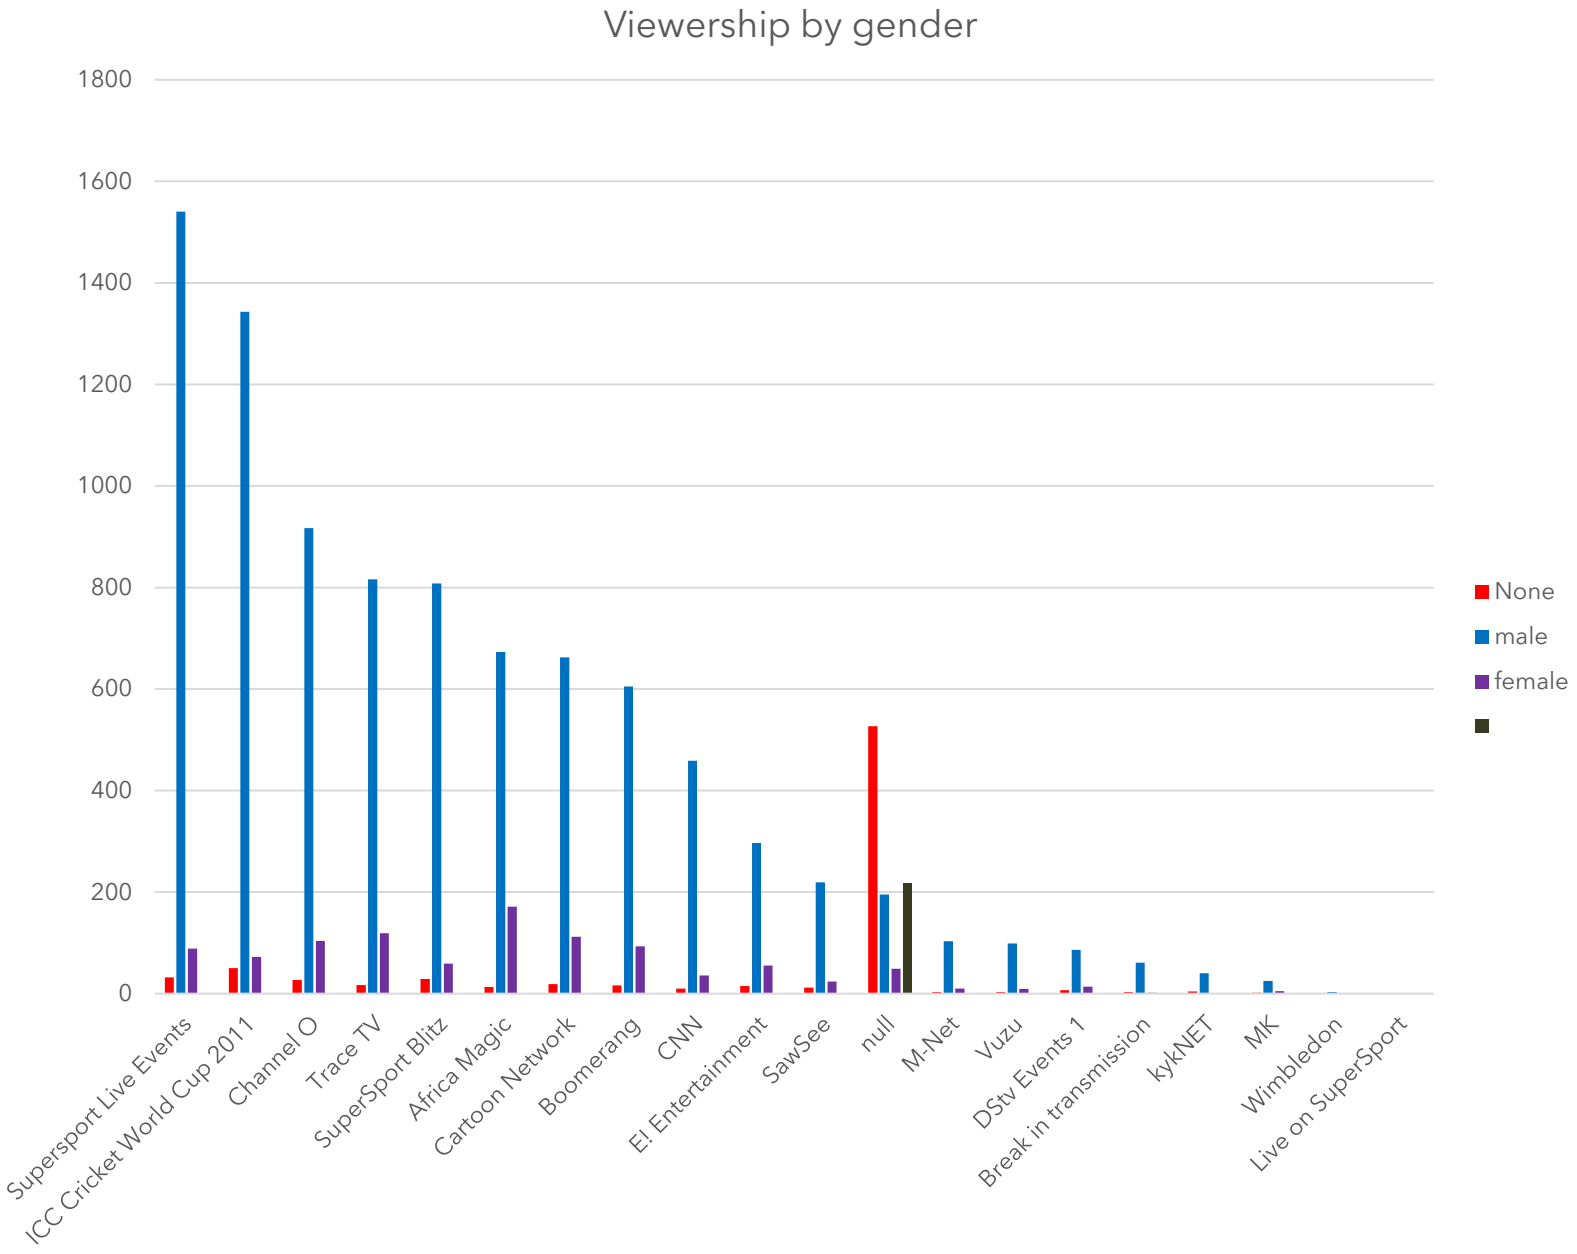








Summary-What content would you recommendations on low consumption days



- Males contribute to 82% of the viewers by gender. According to the data, they prefer sports and music. Curate the content to include interesting games and music on low consumption days
- Ages 18 and 64 have high counts of viewership, shows that are preferred by adults should be played on low viewership days.
- The afternoon time slot(12pm-6pm) has a high count of viewers, schedule TV shows and hit movies, advertise them prior to get viewership on low consumption days.

Initiatives to increase user base

- Use social media advertising
- Put interesting shows on less busy days to boost viewership
- Use ML models to study customer preferences and send recommendations via email
- Have discounts for family subscriptions to encourage current customers to join with their families
- Survey customers to find out more about their preferences, areas of improvement for Bright TV and how to curate our services to their liking
